

GDP - Feature #131

Implement multiple datums per PDU

04/10/2019 10:00 AM - Eric Allman

Description			
<p>The GDP protocol supports the ability to include multiple datums in a single PDU that are linked together in a hash chain where only the last datum is signed. This is considerably cheaper than signing all the datums. However, the code currently only allows one datum per PDU. This should be fixed, both for commands (APPEND) and responses (CONTENT).</p>
