

GDP - Bug #96

Existing subscription resend previous records sent when reestablishing connection to GDPLOGD

03/07/2017 07:46 PM - Rico Maestro

Description			
Hello,			
Since our gdplogd is still crashing (bug #76), I've made a script that checks if the gdplogd is still responding and will restart it if it's not. Now, the client (just the reader_test_subscribe.py in the apps folder) still works without error but for subscriptions, records that have been returned before restarting gdplogd by get_next_event were returned again after the client re-subscribes.			
Attached is the output of the client with gdp.dbg_set("*=30") setting. The tuples (x,y) printed are the parsed data. GDPLOGD was restarted at line 1380.

- Assignee set to Eric Allman

Rico, my apologies. I've been trying to fix issue [#76](#), which has involved far more extensive changes than I had hoped. I've made progress, but my changes have created other problems, including resource exhaustion (subscriptions aren't being expunged properly). The problem you are seeing is one I've already fixed but haven't pushed yet. The good news is that the crashes aren't happening any more. The bad news is that there are even more serious bugs.

On gdp-01 I've reverted to commit:ebf83f8e, which I hope at least has familiar bugs. My top priority right now is to get this fixed. If I can't get it fixed tomorrow (Wednesday) there may be some delay since I'm leaving town for Japan on Thursday morning, but I'll work from there if necessary.

#2 - 03/11/2017 04:39 PM - Eric Allman

- Status changed from In Progress to Feedback

This should be fixed now. Please give it another try.

#3 - 04/16/2017 04:05 PM - Eric Allman

Rico, is this resolved now?

#4 - 05/19/2017 12:20 PM - Eric Allman

- Status changed from Feedback to Closed

I'm closing this because I'm pretty sure it has been fixed and I haven't heard back from Rico to the contrary.
